The Global State of Financial and Economic Crime

The global financial system faces a continuing threat from financial and economic crimes, such as money laundering, terrorist financing, breaches of economic sanctions, bribery, corruption, fraud, and market abuse. Looking at 2025 and beyond, this threat is set to **intensify due to rapid technological advancements. Virtual assets, DeFi, AI, and machine learning** are fundamentally changing both the methods used to perpetrate these crimes and the tools available to counter them.

Approximately **USD 3.1 trillion in illicit funds circulated** within the global financial system in 2023. Most concerningly, the World Economic Forum's Global Coalition to Fight Financial Crime reports that **law enforcement agencies seize or freeze less than 1% of these illicit proceeds.**

Breakdown of Global Illicit Financial Flows

This growing challenge is underscored by alarming statistics.
The International Monetary Fund (IMF) estimates that "2% to 5% of global GDP"

Phishing & Key Theft

Sending phising emails to trick victims into transferring asset or revealing their Private Keys

Mailcious Approval

Deceving users into siging “Connect Approvals” that grant scammers full access to their wallets

Irreversible Asset Transfer

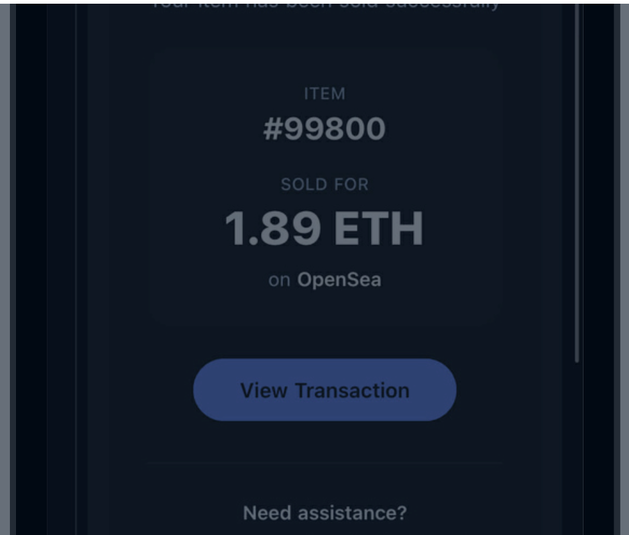

Tricking victims into transferring funds to untraceable scammer’s wallet addresses

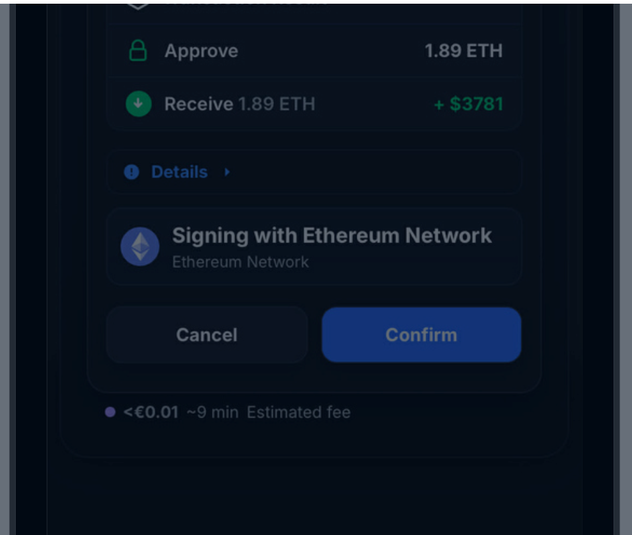

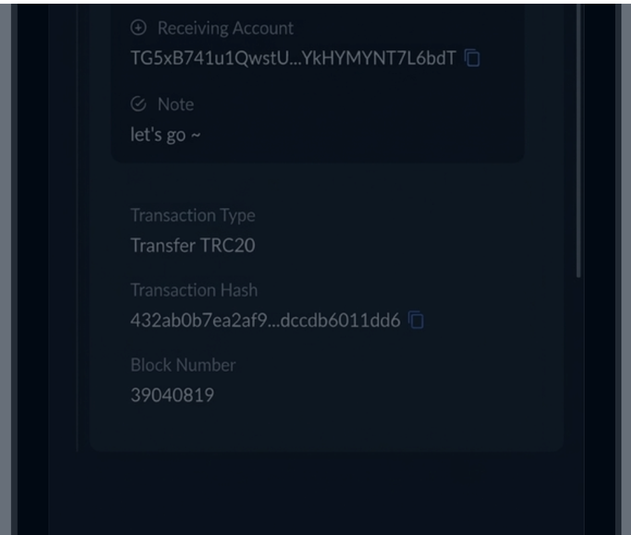

If even Institutions and Corporations are vulnerable, individual users are at far greater risk

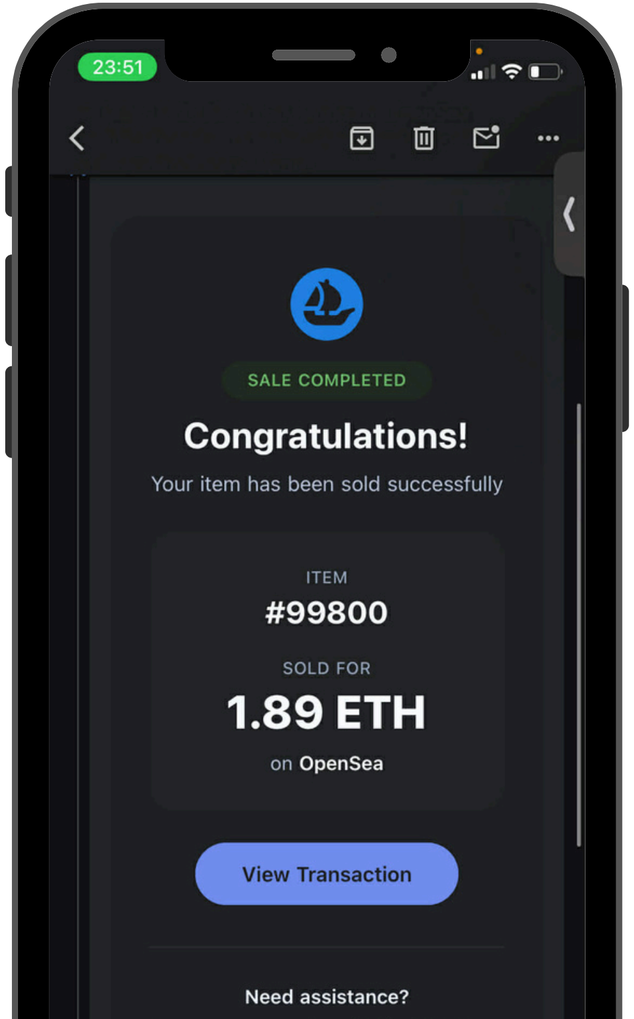

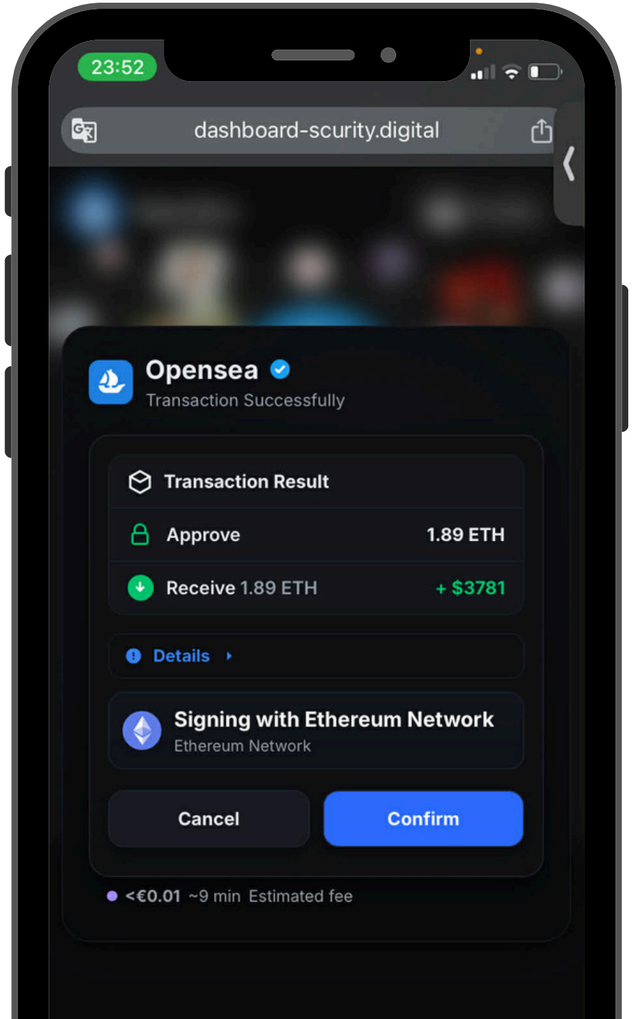

Phishing & Key Theft

Sending phising emails to trick victims into transferring asset or revealing their Private Keys

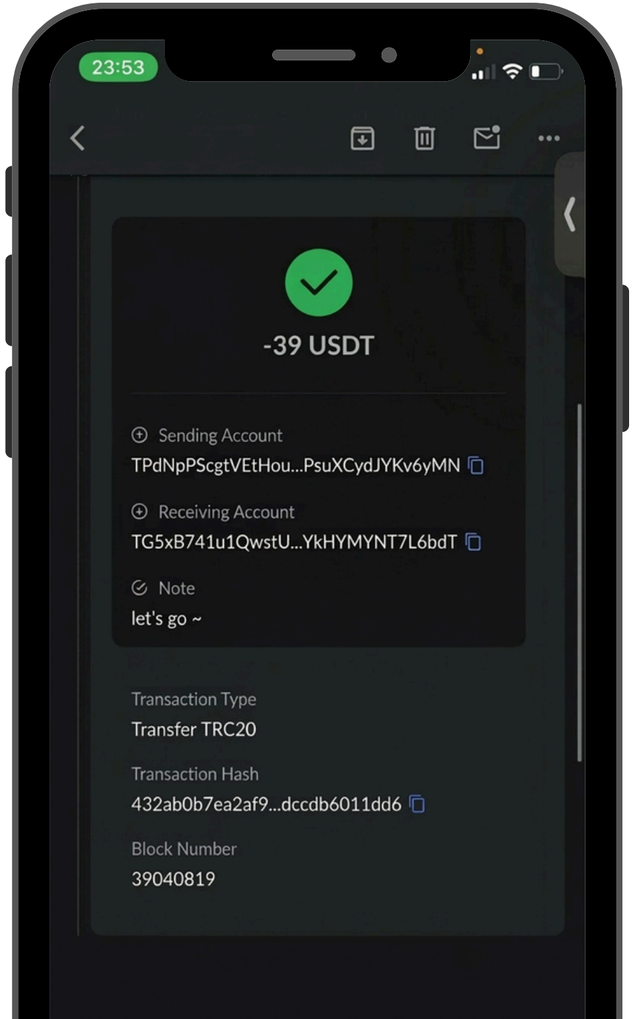

Mailcious Approval

Deceving users into siging “Connect Approvals” that grant scammers full access to their wallets

Irreversible Asset Transfer

Tricking victims into transferring funds to untraceable scammer’s wallet addresses

SWIFT launches tokenized deposit paymentds with 17 global banks

Stablecoins are moving into production at major banks faster than compliance

Opportunity Growth

- Faster Cross-Border Payments
- 24/7 Real-Time Settlement
- Lower Costs & Greater Efficiency
- New Revenue Streams & Market Share
- Financial Inclusion at Scale

Bank-issued stablecoins
The future of money movement

Compliance Challenge

- Real-Time AML & Transaction Monitoring
- Perpetual KYC (pKYC) Customer risk is dynamic
- Blockchain & Ecosystem Intelligence
- Evolving Regulations (Genuius Act, MiCA & more)
- Programmable Money Introduces New Risks

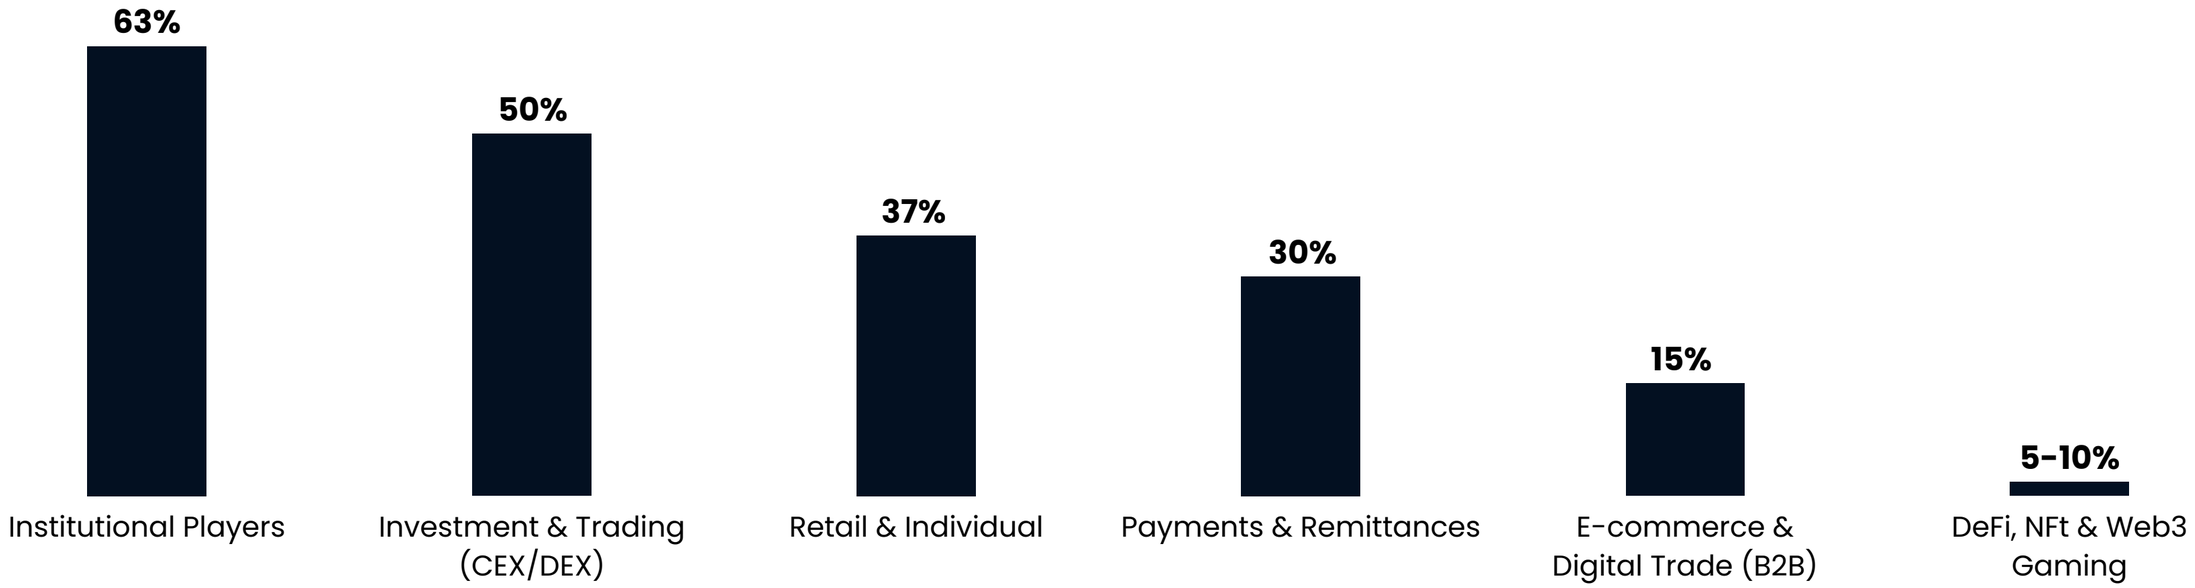

What bank must build into their stablecoin program

- Robust AML/CFT Framework
- Digital Identity & Veriable Credentials
- Blochain Analytics & Wallet Mornitoring
- AI-Powered Risk Detection
- Reserve & Liquidity Management
- Regulatory Reporting & Auditability
- Enterprise Security & Crypto-Resilience

Decoding Market Landscape: APAC Leads Global Transactions via Blockchain and Growth Potential

Asia-Pacific region has emerged as the **global powerhouse for digital assets**, characterized by a complex and rapidly evolving transaction DNA. By analyzing the market through distinct segments Institutional, Retail, and Commercial. We can observe a massive shift toward mass adoption, where high-frequency digital interactions now demand a **new standard of trust and systemic integrity**.

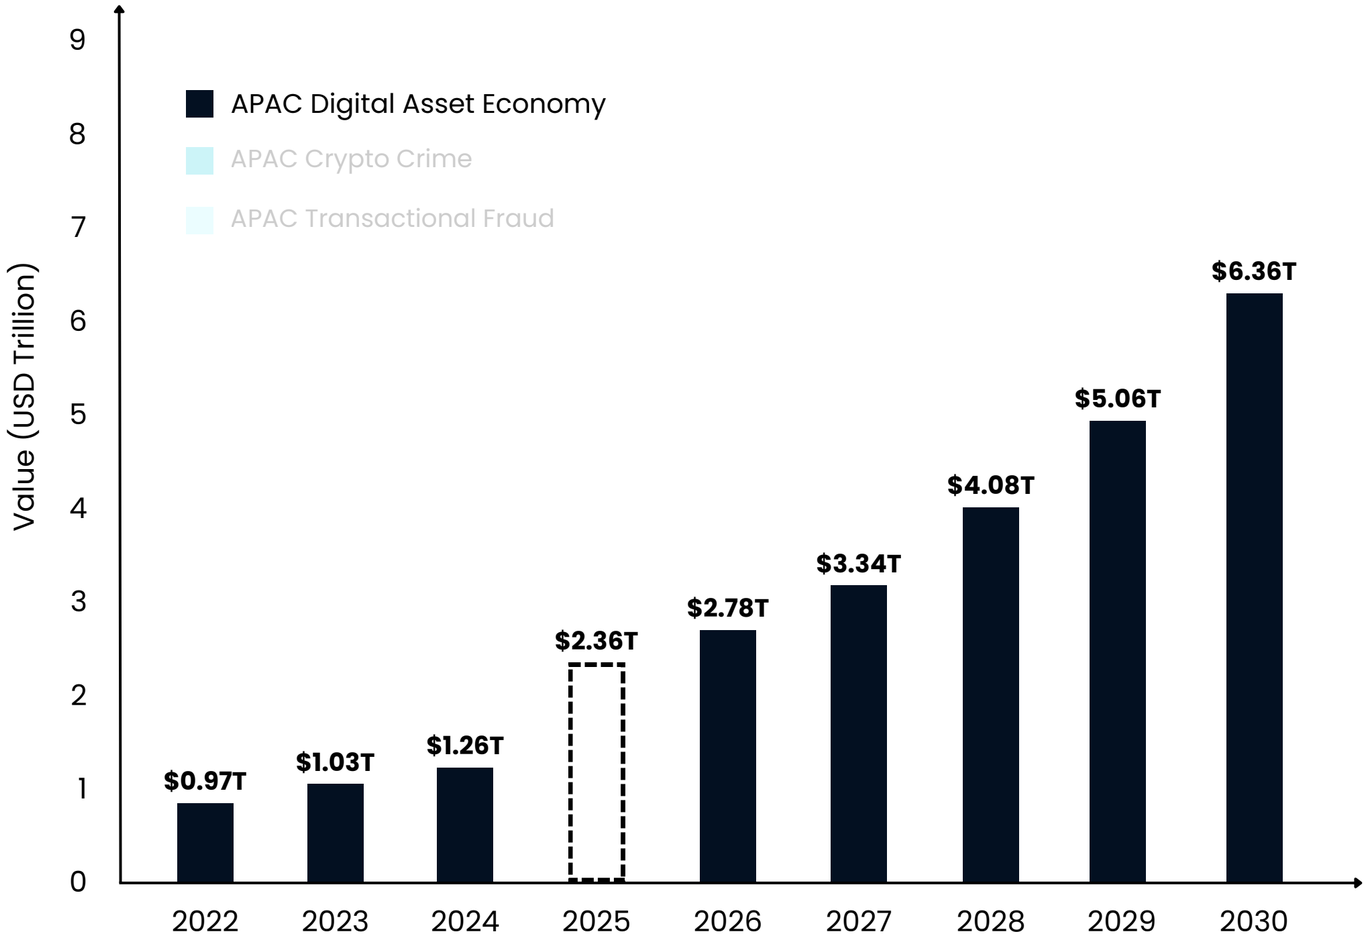

Exploring the core segments driving a $2.36 Trillion USD digital asset economy in the APAC region

Securing Global Digital Trade with Our Agentic AI!

How Scammers Lure Victims ...

Authorized Push Payment (APP) fraud

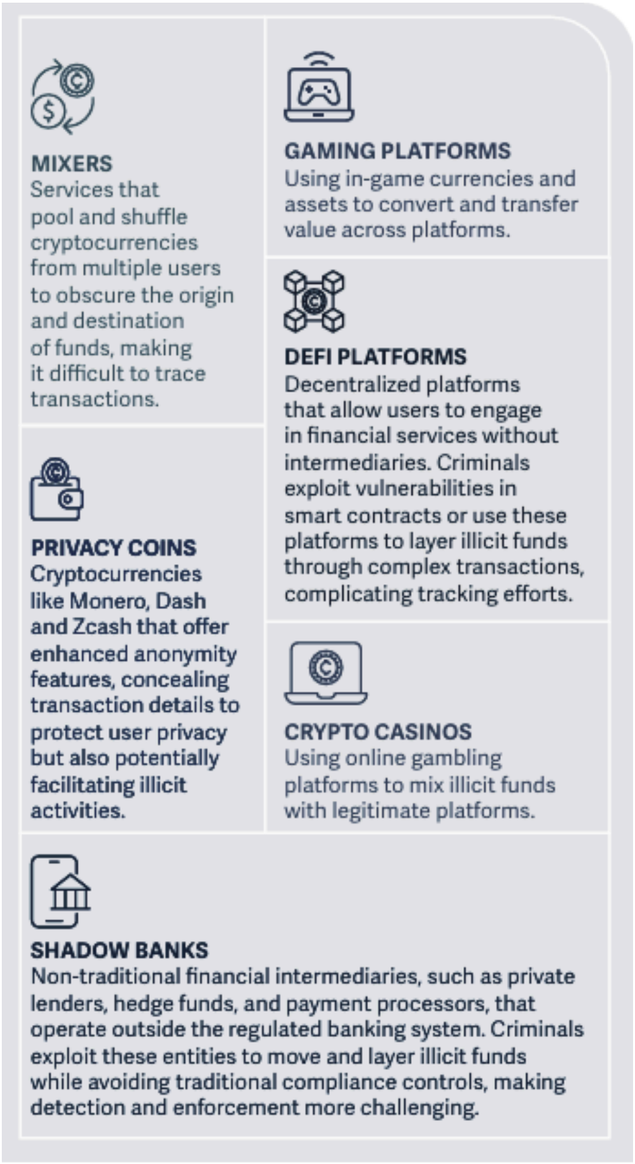

Scammer identifies a target
Tactics used include crypto airdrops, Mule account, or social engineering.

Victim initiates a transaction
Under deception, the victim initiates the transaction, believing the transaction is legitimate.

Payment is transferred
The payment is processed through instant P2P payment networks or real-time settlement systems

Funds land in the fraudster's account
The fraudster secures the funds in their controlled account, often using mule or intermediary accounts.

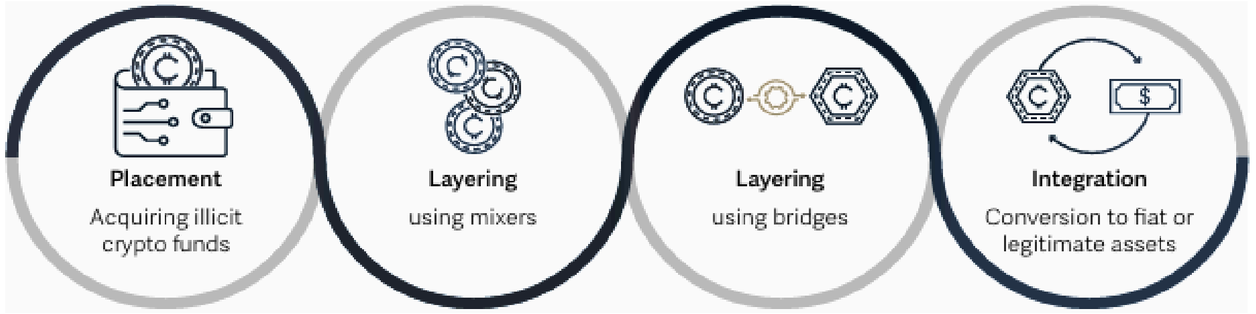

Money is laundered or withdrawn
Layering techniques are used to make the recovery difficult.

Virtual Assets Risks: Fraud, Money Laundering, and the Need for Stronger Oversight

operations involving virtual assets are often highly complex, employing mixers, cross-chain bridges, and intermediary wallet hops to obscure the origins and movements of illicit funds. Cybercriminals leverage several platforms to layer illicit funds.

Peer-to-peer (P2P) transfers are one of the primary channels used by fraudsters to steal funds from victims. We can proactively protect customers by preventing fraudulent transactions **before** they are deceived into transferring funds.
