team1 | Ecosystem Hub

PARTICIPANT GUIDE

How to submit your project.

A step-by-step walkthrough for hackathon builders on hub.team1.network

Welcome, builder

This guide shows you how to find your hackathon on the team1 Ecosystem Hub, build your project page, and submit it to the judges. Read it before the event starts so you can spend the hackathon building, not figuring out forms.

The flow at a glance

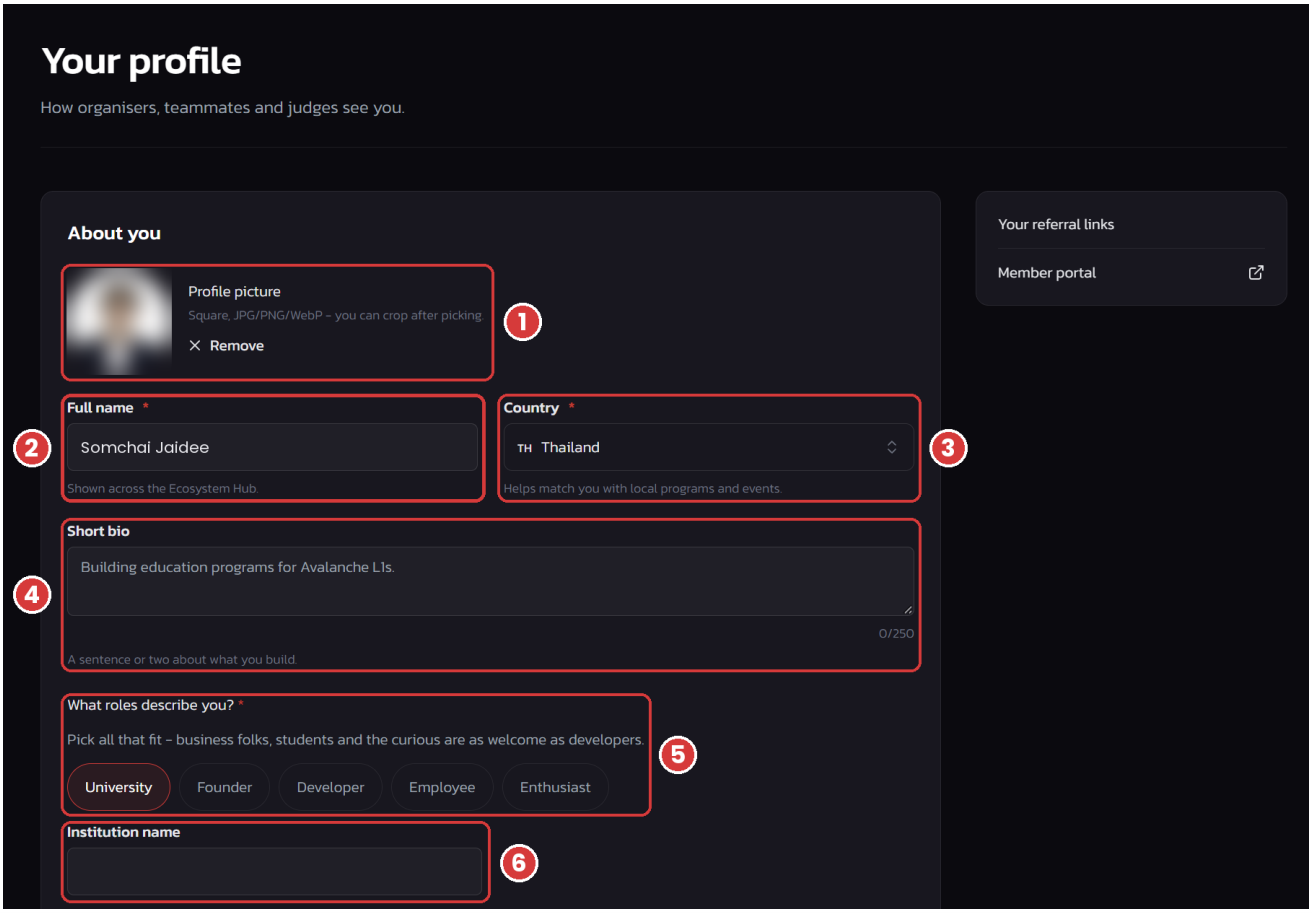

1. Sign in and set up your profile with your **full name in English**
2. Find your hackathon under **Events**
3. Click **Register** on **October 15** and wait for the organisers to approve you
4. Open the event page and read the rules, tracks and timeline
5. Create your project and fill in the details judges need
6. Add your tech stack, how it's made and code repo
7. Add your pitch deck (Google Drive) and demo website
8. Submit your project before the deadline

Most important: Judges score exactly the version you submit. They will open your **GitHub repo**, **demo website** and **pitch deck**, so make sure all three links work and are publicly accessible.

STEP 1

Set up your profile

Go to **hub.team1.network** and sign in. Then click your **profile picture** in the top-right corner and choose **Your profile**. This is how organisers, teammates and judges see you.

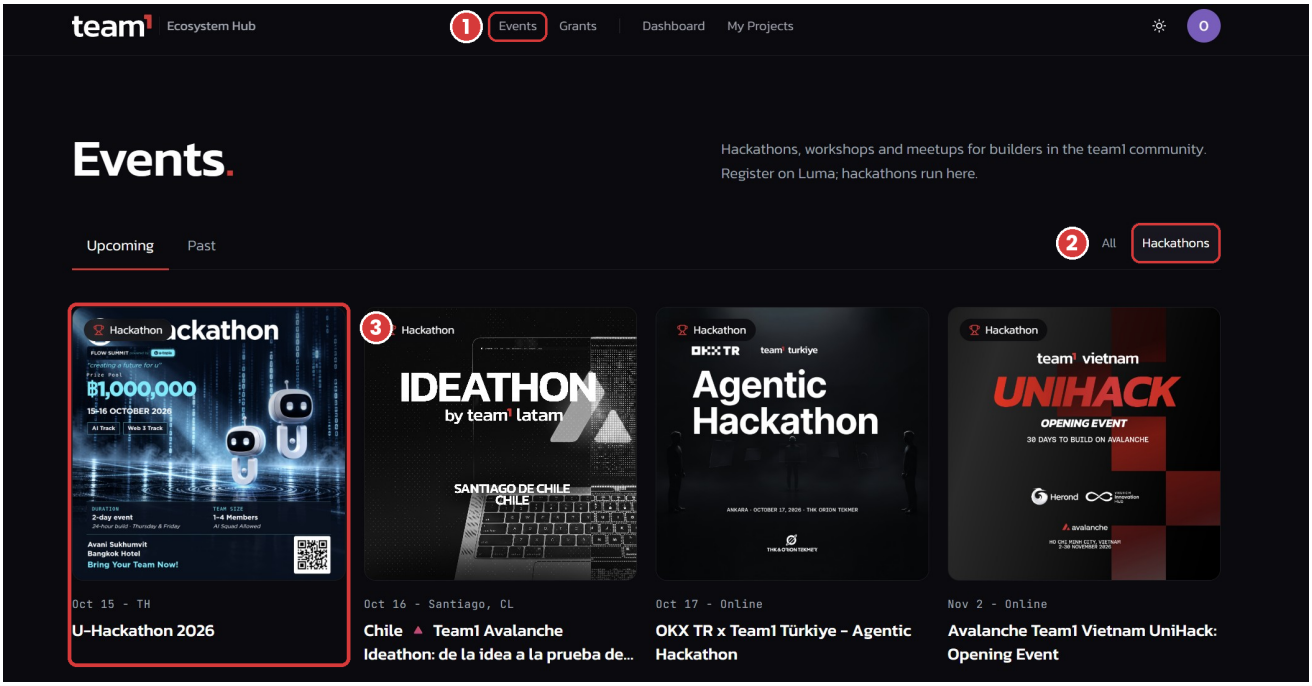

Your profile page

1. **Profile picture.** Square, JPG/PNG/WebP. A clear photo of your face helps organisers recognise you on the day.
2. **Full name (required).** Use your **full name in English**: first name and last name, as on your ID (for example, Somchai Jaidee). No nicknames, and no Thai script.
3. **Country (required).** Where you are based.
4. **Short bio.** A sentence or two about what you build.
5. **Roles (required).** Pick all that fit: University, Founder, Developer, Employee or Enthusiast.
6. **Institution name.** If you picked University, enter your university or school name.

STEP 2

Find your hackathon

Once your profile is set up:

The Events page

1. Click **Events** in the top menu.
2. Stay on the **Upcoming** tab and choose **Hackathons** to filter the list.
3. Click your hackathon's card to open its event page.

STEP 3

Register and wait for approval

Before you can submit anything, your team needs to register for the hackathon on the Hub and be approved by the organisers. **Teams should register on October 15.**

1. On **October 15**, open the event page and click the red **Register** button.
2. The organisers review your registration and **approve** it.
3. Once you're approved, the red button changes to **Submit** (for example, Submit your Prototype submission, as shown in Step 4). Now you can submit your work.

> **Don't wait:** Register on **October 15**, as early in the day as you can. You can't submit until the organisers approve you, and approval may take some time. If you're still waiting close to the deadline, contact the organisers.

STEP 4

Get to know the event page

The event page has everything about your hackathon: prize pool, submission deadline, team size and tracks.

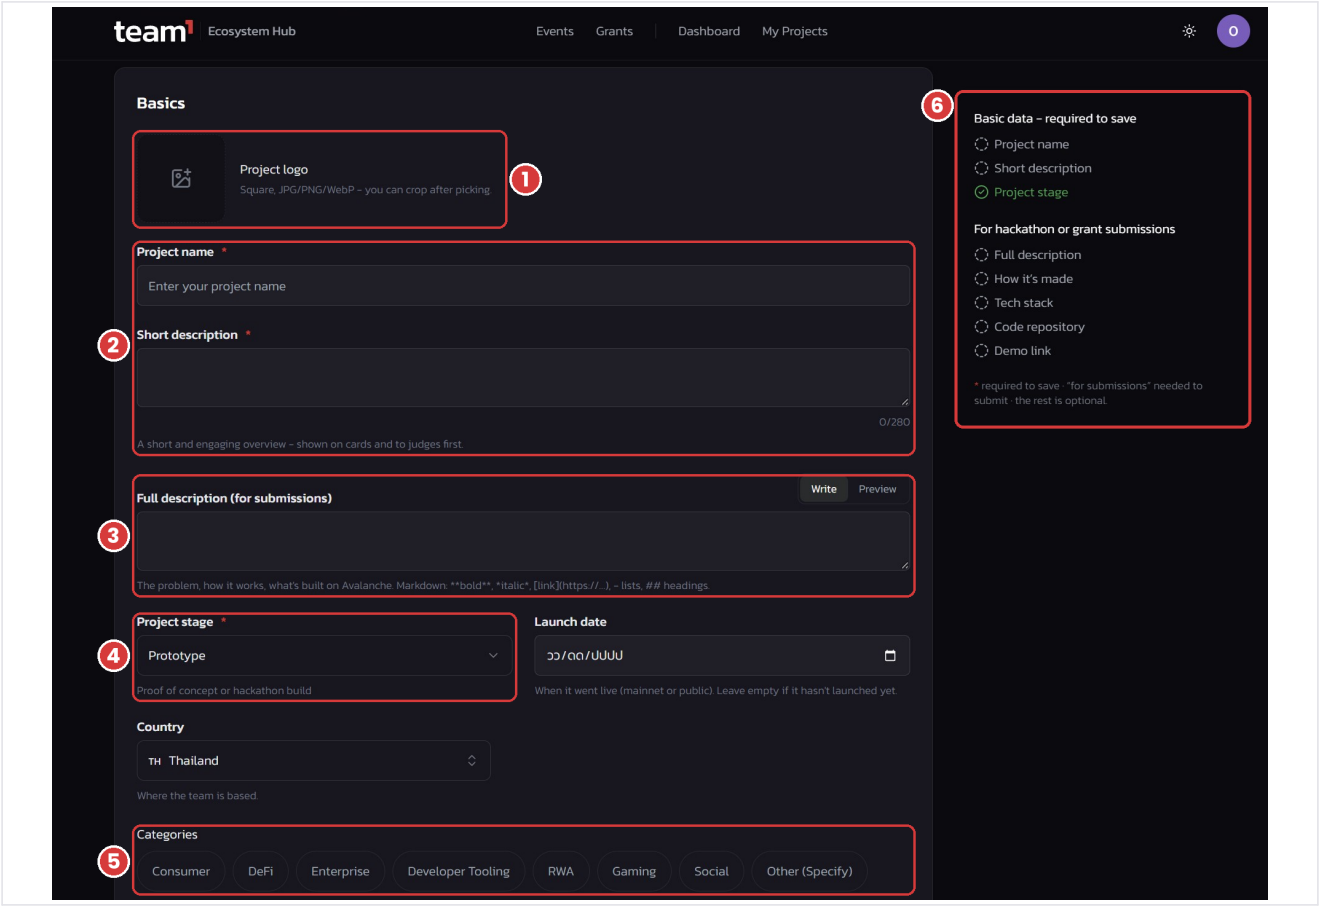

The event page for U-Hackathon 2026

1. **Submit button.** Opens the submission page for the current round (here, Prototype). It only appears after the organisers approve your registration (Step 3). You'll use it in Step 8.
2. **Invite a friend.** Share the event with teammates or friends.
3. **Event page on Luma.** Venue and schedule details.
4. **About, Tracks, Prizes, Timeline, Rules.** Read these before you start, especially the Rules and the Timeline, so you know which deadline applies to you.

STEP 5

Create your project: the basics

Create your project from **My Projects** in the top menu (or edit an existing one). The form is long, so here is what each part is for.

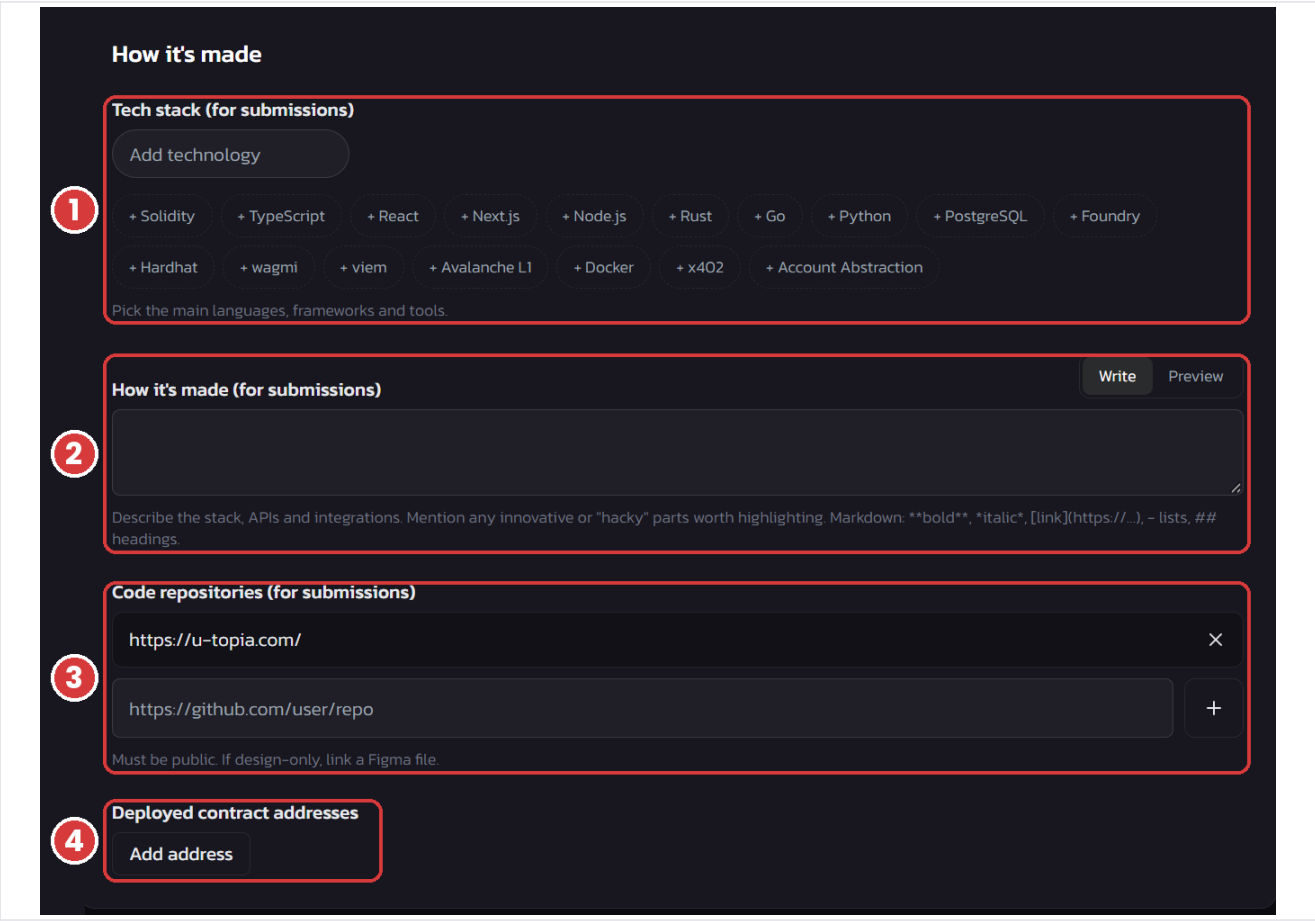

The project form: Basics section

1. **Project logo.** Square, JPG/PNG/WebP. You can crop after picking.
2. **Project name** and **Short description** (up to 280 characters). Required to save. The short description is the first thing judges read, so make it clear and catchy.
3. **Full description.** The problem, how it works, and your project details.
4. **Project stage** (for example, Prototype). Also set the launch date if it's live, and your country.
5. **Categories.** Pick the ones that fit (DeFi, Gaming, RWA and so on).
6. **Checklist.** Turns green as you fill things in. Items under For hackathon or grant submissions must be complete before you can submit.

STEP 6

Explain how it's made

Further down the same form. This section tells judges what you built and how, and it's where they find your code.

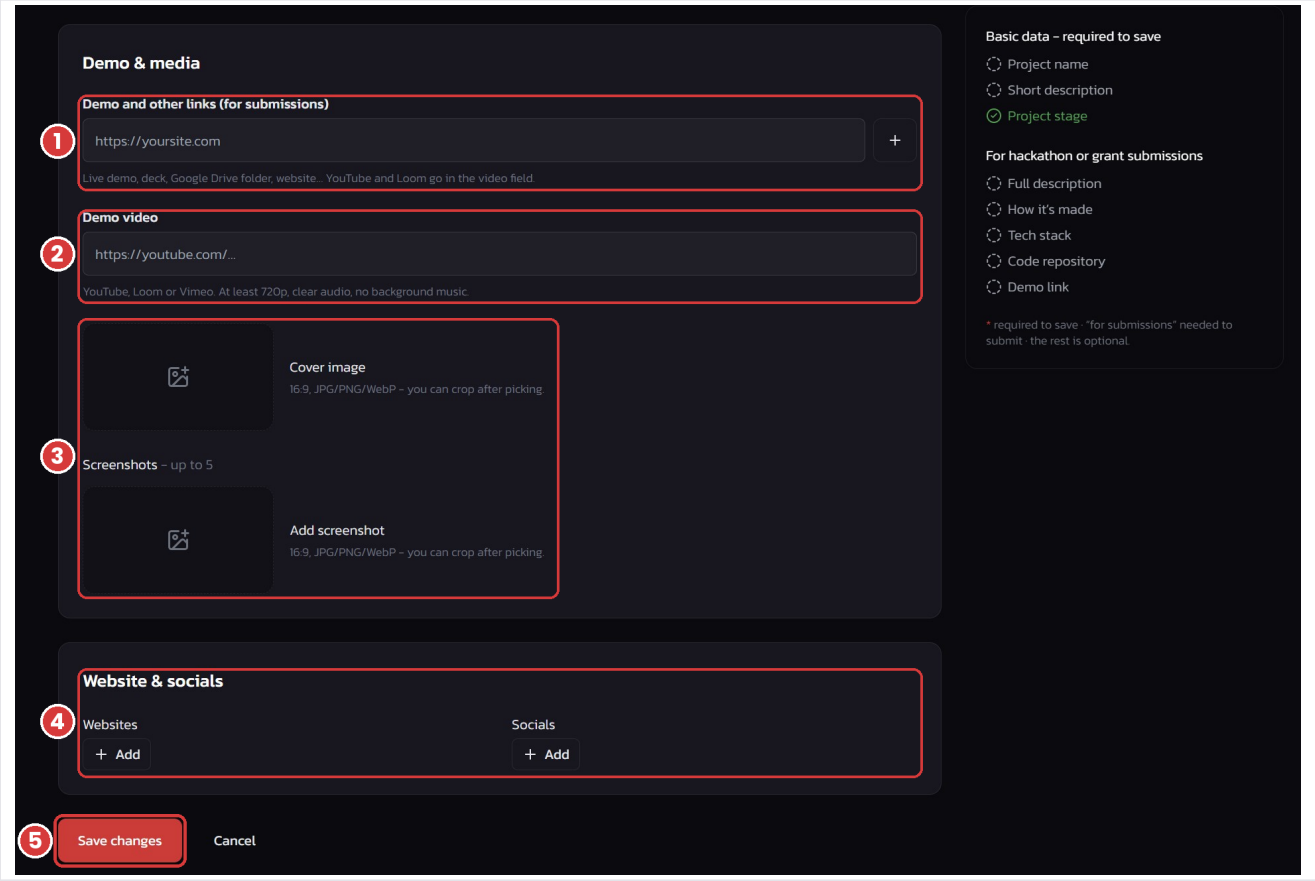

The project form: How it's made section

1. **Tech stack.** Type in **Add technology** or click the suggestions (Solidity, React, Avalanche L1 and so on). Pick the main languages, frameworks and tools. **If you used any partner tools — Tokenomist, ElevenLabs, U-Bot or Avalanche — you must add them here too.** Type the name in **Add technology** if it isn't in the suggestions.
2. **How it's made.** Describe the stack, APIs and integrations. Point out anything innovative or "hacky" worth highlighting.
3. **Code repositories.** Paste your **GitHub repo** link and click **+** to add more. Repos **must be public**.
4. **Deployed contract addresses.** Click **Add address** for each contract you deployed, so judges can check it on-chain.

STEP 7

Add your pitch deck and demo

Further down the same form. These are what judges open first, so take your time here.

The project form: Demo & media and Website & socials

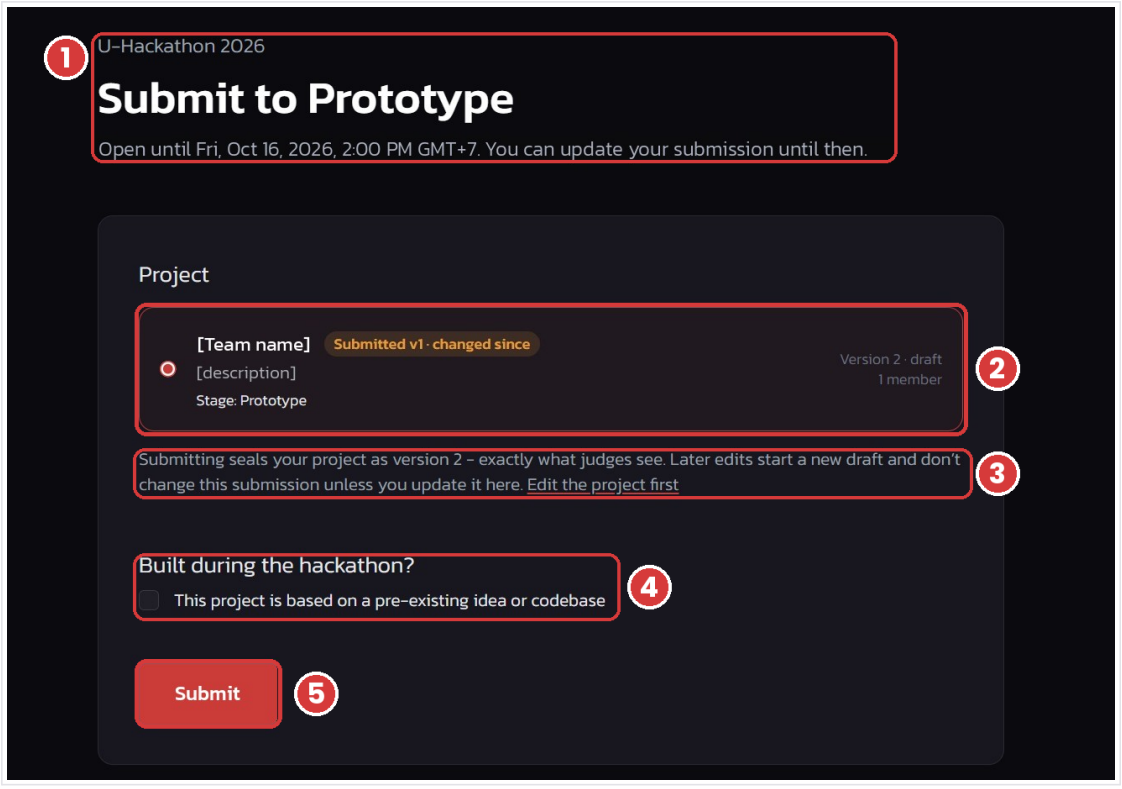

1. **Demo and other links (required).** Add **two links** here: the **Google Drive link to your pitch deck**, and your **demo website**. Paste the first link, then click **+** to add the second. In Google Drive, set sharing to Anyone with the link can view, or judges won't be able to open your deck.
2. **Demo video (optional).** Not required for this hackathon. You can leave it empty.
3. **Cover image (optional)**, 16:9, and up to **5 screenshots** of your product.
4. **Website and socials.** Optional, but helps judges learn more about your team.
5. **Save changes.** Saving keeps your project up to date but does not submit it. You still need Step 8.

Check: Every link here (demo, deck, repo) must open for anyone. Test them in a private browser window before you submit.

STEP 8

Submit your project

Go back to the event page and click the **Submit** button.

The submission page

1. **Round and deadline.** The round you're submitting to and when it closes. You can update your submission until then.
2. **Your project.** Select it. The label shows its status. Submitted v1 · changed since means you've edited the project after submitting.
3. **Versions.** Submitting seals your project as a version, and that's exactly what judges see. Later edits start a new draft and **don't** reach judges unless you update the submission here.
4. **Built during the hackathon?** Tick this box if your project uses a pre-existing idea or codebase. Be honest; judges take it into account.
5. **Submit.** Click it to send this version to the judges.

> **Important:** Edited your project after submitting? Come back to this page and click **Submit** again before the deadline, or judges will see the older version.

Before the deadline

Run through this checklist before the round closes.

- ☐ Your profile shows your **full name in English**
- ☐ Your registration is **approved** and you can see the Submit button
- ☐ Name, short description and full description are clear and complete
- ☐ **GitHub repo** is added and **public**
- ☐ Tech stack includes any partner tools you used (Tokenomist, ElevenLabs, U-Bot, Avalanche)
- ☐ **Demo website** works and loads without errors
- ☐ **Pitch deck** Google Drive link is added and set to Anyone with the link can view
- ☐ Screenshots are added (cover image is optional)
- ☐ Every item on the checklist in the project form is green
- ☐ "Pre-existing idea or codebase" is ticked if it applies
- ☐ Project is submitted, and submitted again if you changed anything since

Tips for a strong submission

- **Lead with the problem.** In the first lines, say who has the problem and how your project solves it.
- **Show it working.** Make sure your demo website shows the real product, not just a landing page.
- **Explain the Avalanche part.** Say clearly what runs on Avalanche and why.
- **Submit early, update later.** Submit a first version as soon as you can, then update it. That way you're never caught out by the deadline.

> **Questions or problems?** Contact the organisers of your hackathon. Fill in your contact here:
